Explore the latest features in UpToDate

What’s new

If you want to quickly see what’s changed in your specialty, check out What’s New. It includes the most important changes and additions to our content. Many of our users consult this section to get the latest information on areas outside of their primary specialty.

Practice Changing UpDates

Updates that have important or immediate implications for how clinicians practice are uploaded immediately upon completion of peer review. These appear in Practice Changing UpDates, which is listed as a separate category within What’s New. You can also type "Practice Changing UpDates" into the search box to get a full listing.

Drug Interactions Database

Clinicians can quickly check for possible drug-to-drug and drug-to-herb interactions with the UpToDate drug interactions program (in partnership with Lexicomp®). To access this database, click on the Drug Interactions link under the search box.
Medical Calculators

UpToDate includes calculators to help you quickly and accurately calculate many different medical measurements. To view a list of calculators available, click on the Calculators tab located at the top left side of the page. To find a specific calculator, type a description of the calculation into the search box (e.g., Body Mass Index).

Patient Information

UpToDate provides nearly 1,500 articles that clinicians can review with patients in the exam room, print out as handouts, or send via email. Clinicians and patients will use the same evidence-based recommendations to make the right decisions.

CME at No Additional Cost

Clinicians who access UpToDate through an EMR, portal or other integrated system can earn CME — including AMA PRA Category 1 Credit™ — every time they research a question using UpToDate.
